Professional Summary

Backend-focused Senior web developer with hands-on experience building scalable backend systems, RESTful APIs, payment integrations, and database-driven applications using modern JavaScript/TypeScript technologies. Skilled in backend architecture, API development, authentication systems, and third-party integrations. Experienced working on real-world client projects through [Upwork](#) collaborations, including development of a brand-hub platform for a Norwegian client.

Technical Skills

Backend Development

- Node.js
- Express.js
- NestJS
- REST API Development
- Authentication & Authorization
- Third-Party API Integrations
- Stripe Payment Integration

Databases

- PostgreSQL
- MySQL
- MongoDB
- TypeORM
- Mongoose

Programming Languages

- JavaScript

- TypeScript
- SQL

Tools & Technologies

- Git & GitHub
- Docker
- Linux & Shell Scripting
- ChatGPT API
- VS Code

Learning & Exploration

- Data Engineering Fundamentals
 - Apache Spark
 - Apache Airflow
 - Kafka
 - ETL Pipelines
-

Experience

Backend Developer — UFusion (Local)

June 2023 – March 2024

Worked with a Norwegian client on a brand-hub platform and backend systems development.

Responsibilities & Achievements

- Built and maintained backend APIs using Node.js and Express.js
 - Developed scalable database structures using PostgreSQL and MongoDB
 - Integrated Stripe payment processing systems
 - Implemented authentication and secure API workflows
 - Worked with third-party APIs and backend integrations
 - Collaborated remotely on feature development and system improvements
-

Projects

POS Backend System

- Developing a multi-tenant Point of Sale backend using NestJS, PostgreSQL, and TypeORM
- Designing flexible inventory, category, and product variant systems
- Implementing scalable architecture for store management

CRUD API Platform

- Built CRUD APIs using Node.js, Express, Sequelize, and MySQL
- Added dynamic bank information handling based on country and currency selection
- Integrated payment workflows with Stripe

Store Inventory Architecture

- Designed optimized category-product relationships for store-specific inventory systems
 - Focused on scalable backend structure and clean relational database design
-

Education

Completed Higher Secondary School (HSSC) under the [Aga Khan University Examination Board \(AKU-EB\)](#) in 2026.

Interests

- Backend Architecture
 - Data Engineering
 - System Design
 - Database Optimization
 - Cloud & Scalable Systems
 - Open Source Development
-

Languages

- English
- Urdu

Appointment Setter (Remote)

[Digital Daun](#) — 6 Months

- Assisted with outbound lead generation and appointment setting for service-based businesses.
- Conducted cold outreach through SMS, email, and social platforms to engage potential clients.
- Learned prospect qualification, communication strategies, and client follow-up processes.
- Helped schedule discovery calls and maintain organized lead tracking workflows.
- Developed experience in sales communication, persuasion, and customer relationship management.
